VIB 7.725-CCV	VIBROWEB XP Basic Device for ICP Acceleration Transducer, NCV	31.12.2023

Last Time Buy

In this case, a last time buy is unfortunately not possible, because production operations have been ended.

Repair Options

Many replacement components for the VIBROWEB XP are already unavailable. Due to this spare part shortage, Pruftechnik can only repair VIBROWEB XP **Version 2.0 or greater**. The following repairs can be offered on VIBROWEB XP Version 2.0 or greater:

- Battery exchange
- Power supply exchange
- Dimm PC
- Motherboard exchange (while remaining replacement parts last*)

* for VIB 7.710, VIB 7.715 are just 16 pcs in total remaining, after consumption no more Motherboards available.

Software support

In order to focus our resources on the software support of our go-forward platforms, we have decided to **Limit** support of the VIBROWEB XP up to OMNITREND Center version **2.4.3**.

VIBROWEB XP will **NOT** be supported in versions of OMNITREND after **2.4.3**.

Customers with VIBROWEB XPs who want to change from older OMNITREND (Win) to OMNITREND Center due to Windows 10 compatibility issues should upgrade their system to OMNITREND Center 2.4.3. OMTC Version 2.4.3 is available on the following content server path: "**Marketing\Downloads\Firmware_Software\CM\Software\OMNITREND CENTER\OMTC 2.4.3 Installers**"

Product Upgrade and Replacement of VIBROWEB XP with VIBGUARD

In order to make upgrading and replacing the VIBROWEB XP devices more attractive for **non-wind turbine customers**, we recommend that each respective regional sales office determine an aggressive discount on VIBGUARD units (Even up to selling the VIBGUARD units at or near cost, as long as the discount is being applied **only** to units that are directly replacing a VIBROWEB XP unit). All discounts should be approved on a case-by-case base.
